

De (langverwachte) nieuwe OCB is beschikbaar.
hieronder wat meer info.

prijzen:

OCB met de lage drukslang en ademloop (T-stuk > mondstuk en mondstuk > T-stuk) is 695 euro incl BTW (574,38 euro excl. BTW)

Er zullen geen transportkosten worden aangerekend.

De OCB is geschikt voor zowel de classic, vision, evolution en evolution plus. Er zit steeds een lage druk slang bij die je op de manifold kan aansluiten. Heb je een oud model waarbij de schroefdraad op beide T-stukken gelijk is, neem dan contact op !

De reacties van mensen die de OCB reeds geïnstalleerd hebben, zijn uiterst positief !

Bekijk ook de spares-lijst via deze [link](#), indien je nog spare-parts of dergelijke nodig hebt.

Sportieve groeten,
Steven

We are delighted to announce that the OCB - Open Circuit Bailout Mouthpiece, is now available.

The OCB enables the diver to bail out to open circuit easily, with one movement, without removing the mouthpiece from their mouth.

The custom designed mouthpiece is extremely compact and lightweight, weighing in at only 350g in air and is neutrally buoyant in water. The OCB features lever operated switching between open circuit and closed circuit making it very easy to use.

The OCB has undergone the extensive third party testing required for CE approval. It is rated to EN14143, the rebreather standard, EN13949, the nitrox standard and EN250, the regulator standard and in fact exceeds the requirements for this standard. The OCB can be used in fast flowing water, for instance when scootering.

Ambient Pressure Diving's patented dual valve technology allows gas to be fed from the left or right facilitating individual configuration and is ready for use with high oxygen percentage gasses.

Manufactured to a very high standard in our specialist facility it can be fitted to existing units and is optional on the purchase of a new unit. As with all APD products, full spares and back up are available.

The OCB is available as standard with the convoluted hoses allowing the diver to easily interchange the mouthpiece that is connected to their Inspiration, Evolution or Evolution+ by simply disconnecting at the T-pieces. The OCB is supplied with a 1.5 metre low pressure hose as standard, using our reusable LP fittings which allow you to shorten the hose as required.
